## INCOMPRESSIBLE FLOW COMPUTATIONS

LAP Lambert Academic Publishing Jul 2016, 2016. Taschenbuch. Condition: Neu. Neuware - This book deals with incompressible Navier-Stoke's equations in artificial compressibility (AC) formulation. A high resolution unstructured finite volume scheme, based on HLLC-AC Riemann solver is explained. The solution dependent weighted least square (SDWLS) gradient calculation procedure for unstructured grids, which produces accurate results with computational efficiency is explained in detail. The artificial compressibility based formulation is extended for unsteady incompressible flow involving static and moving grids. In case...
