## Publications of the Astronomical Laboratory at Groningen Volume 21-26

By Rijksuniversiteit Te Laboratorium

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: .When the sky is palish-blue or milk-white, one feels inclined to suppose that the air is less transparent. On April 1, however, the sky was pale-blue and the air more transparent than on the preceding nights. It will not be difficult to find other similar instances. 40. If the meteorological elements we have recorded, have any effect upon the general brightness of the sky, it is not very striking. The number of data, however, is much too small to draw reliable conclusions. 12. The brightness of various portions of the sky. The mean brightness of different portions of the sky is given in table 8. The rotation numbers of the observed portions correspond with those of table 1 (the comparison-portions in heavy type). The following six columns contain the galactic latitude  $b$ , the azimuth  $A$ , the zenith-distance  $z$ , the logarithms of the relative and absolute brightness,...
